

Infrared-Controlled Space War

You need an infrared remote control for this project, such as any TV/stereo/DVD remote control in your home. Press the **ON** button in space war website. Point your remote control toward the **infrared receiver** and press any button, the **red LED** and **speaker** will turn On. Sometimes this circuit may activate without a remote control due to infrared in sunlight or some room lights. If this happens, try moving to dark room.
